Tariffed Name (Standard)

BellSouth Dedicated Ring Service

For customers requiring high-capacity, dedicated transport, BellSouth Dedicated Ring service offers a SONET based, self-healing ring network. Available in DS1 and DS3 capacity, this service is guaranteed under BellSouth Service Assurance Warranty.

BellSouth SPA DS1 Shared Ring Service & BellSouth SPA DS3 Shared Ring Service

BellSouth shared ring service delivers a high capacity transport link with outstanding performance and reliability. This service maximizes utilization with guaranteed survivability and simplified pricing and administration.

BellSouth Managed Shared Ring Network

A shared, high capacity network service designed to provide a transport link with outstanding performance and reliability in a specified metropolitan area. This service provides optimal utilization of the customers services and BellSouth facilities.

BellSouth SPA Point to Point Network

BellSouth SPA Point-to-Point network service provides digital transport service with high capacity, reliability and flexibility using DS3 Special Access, 44.7 Mb/s bit rate.

BellSouth AIN Virtual Number Call Detail

This product helps quantify the effectiveness of an advertising campaign by providing call details to measure response. AIN technology is used to capture call data before a call is routed to the subscriber's regular number.

BellSouth SPA Customer Reconfiguration Service

Customer Reconfiguration service is a network management system that gives end users direct network control for fault management, performance management, security management and reconfiguration management.

BellSouth Exchange Access Frame Relay Service

A cost-effective solution to wide-area networking needs, BellSouth Exchange Access Frame Relay service provides a connection-oriented packet-switched data service ideal for creating a network.
